

WOOD PROCUREMENT POLICY

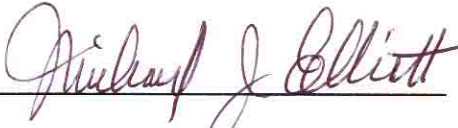

Jasper Group is proud to use wood as our primary resource. No other natural resource can match the environmental advantages of wood. It is 100% natural, renewable, biodegradable and carbon negative.

Jasper Group recognizes that Forests, Forest functions and Forest products contribute to human well being worldwide and every country must value its forests and strive for equity in access to the benefits that forests provide. We believe that the timber industry has the responsibility to the people to base its commercial activities on properly managed and optimized forests

It is the responsibility of our Purchasing Agents to follow our Environmental Preferable Purchasing Policy and to secure wood specified in Jasper Group products:

- from known, legal and well managed sources.
- do not contain endangered wood species listed in appendix I or II of CITES.
- are not plantation grown unless there is a justified net social and environmental gain.
- do not contain conflict wood.
- are not from genetically modified trees.
- are not from areas where traditional or civil rights are violated.

Approved this 19th day of August, 2014
